The application has been amended as follows:

Claim 1 has been replaced with the following:

Claim 1: A subsea gas compressor module having a pressure housing (3) comprising:

an electric motor (1) and a compressor (2), drivably connected by at least one shaft (13);

said at least one shaft being supported by a plurality of magnetic bearings (12) controlled by a control unit (16);

said control unit being placed externally of said pressure housing, and connected to said magnetic bearings by means of wire connections or subsea mateable connectors;

said compressor and motor being mutually isolated by at least one seal (14), thereby dividing said pressure housing (3) into a first and a second compartment comprising the compressor and motor, respectively;

said first compartment being connected to an inlet line (11) and an outlet line for receiving gas and discharging gas, respectively;

said inlet and outlet lines comprising respective valves (7,9) for closing said lines;

said second compartment comprising at least two of said magnetic bearings for supporting said at least one shaft;

said first compartment being subdivided into a third compartment by means of another sealing element (15), comprising one of said magnetic bearings for supporting said at least one shaft; and

a pressure and volume regulator (4) fluidly connected to said second compartment and to a supply (10) of gas and comprising means for sensing respective pressures in said inlet and outlet lines; wherein,

based on the magnitude of said sensed pressure, the pressure and volume regulator controls the pressure at which gas from said supply is injected into said second compartment.
